

Laser marker AUTOMATOR UBI Basic

State	NEW
Category	LASER
Brand	AUTOMATOR
Model	UBI Basic
Serial number	-
Year of manufacture	-
Inventory number	AUT-1025

CHARACTERISTICS

Laser system for small and medium-sized productions equipped with a Micro aWave source that allows to create markings comparable to a 20W fiber laser on many materials. The external protective structure is extremely compact, ideal for being used on a work bench. The door opening and closing system is manual with a security locking system and the internal Z axis is electric. Large CE certified inspection windows on three sides offer a complete view of the internal marking area. It is a Class 1 security device.

Ubi Basic sets a laser source with self-adjusting frequency. Belonging to the new a-Wave™ products family, exclusive Automator technology, the UBI Basic source was built by-passing the concept of “power”, being able to mark, depending on the materials and applications, with performance comparable to that of a 20W fiber. And this guarantees excellent results on plastics, metals, anodized, ceramic, polycarbonate, painted and much more
